Dr. Walsh killed in motor accident

It is with the utmost sorrow and regret that we record the tragic accident which befell Dr. Walsh, staff member of the Victoria University College, on Saturday, May 9. Dr. Walsh was killed when a car in which he was traveling on the Johnstone-Perseus highway, overturned. Dr. Walsh was president of the Union of St. Vincent College and was known personally to many students.

Dr. Walsh was born in Christchurch in 1919. He was educated there and at St. Andrew's College and at Holy Cross, Melbourne. He was ordained in 1948 and holds a degree from the Irish College, Rome, where he obtained his doctorate.

During the war he was chaplain to New Zealand Air Force and then to the Upper Gypsy. In 1949, he took a degree of the University of Oxford.

In his work in this country, Dr. Walsh was highly respected, particularly for his work as president of the Student Union.

The Evening Post said of Dr. Walsh that he "could truly be described as a cultured man. He had a deep knowledge of music and was essentially a scholar. He was widely read and known for his outstanding work in various fields of study, the fruit of the long and laborious work that was his life's work."

Social Democrat Society's first meeting

The formation of this club is one of the first attempts to bring the Social Democrat into the public eye. The Socialist Club was formed in 1883 by friends of William Morris, the great Socialist writer, and has been active ever since. The new club, however, is only the latest of the many similar organizations that have sprung up in the last few years.

The new club met on May 6th, at 7:30 p.m., in the Union Hall. The meeting was called to order by Mr. Holland, who read the minutes of the previous meeting. The club then went into committee in order to discuss the proposed constitution. The constitution was read, and a motion was made and seconded, that the constitution be approved.

Mr. Holland laid stone of new science block

This college has for many years been the center of the educational efforts of the community. The science block, however, has been long overdue. The building will be a monument to the memory of Dr. Walsh, who was a member of the faculty for many years.

Amongst those present were the President of the College, Dr. Holland, who laid the stone ("Incidentally, I would like to mention that the stone I am seling was the one with which Dr. Walsh laid the cornerstone of the new C.S.C. Hall," said Mr. Holland, "and the stone of the new C.S.C. Hall") and the President of the Students' Council, Mr. Marshall, who also attended the ceremony, which was held undertorchlight shinning over in rain.

The new building will house the department of chemistry, geography, and physics.

Mr. Holland devoted most of his address to the inauguration of the science block — including facilities for the numerous and important activities outside the classroom library and laboratories.

Dr. Holland said substantial sums had been raised for the new building and that the project was expected to be completed within the next few years.

Mr. Holland mentioned that he and Mr. Mager and Mr. Marshall had just returned from a tour of inspection of the new building before the ceremony.

In his speech to the students, Mr. Holland said that the new science block would be a monument to the memory of Dr. Walsh, and that it would be a source of pride to all students who had known him.

Mr. Holland said that he had no doubt that the new building would be a source of pride to all students who had known him.
Debate on CMT was disappointing

"That Compulsory Military Training be abolished in New Zealand" was the subject considered at the Debating Club on Friday, June 1. It was not very interesting. Only a few students were present and only a few of these spoke. Two speeches were made, both by students whose voices had not been heard before. One of these voices had never been heard before, and this is not necessarily an indication of their ability, but it is also an indication that these students are inferior in ability to the average student who has taken part in public speaking and debate.

Thomas by Adam, Jr., explained that CMT should be abolished because it is a waste of time and money. He also mentioned that the costs of CMT are too high for the benefit received.

B. Goodwin spoke against the motion. He believed that CMT is necessary for the defense of the country and that it is a waste of time and money to have all men in the country trained for war.

The debate was well conducted and the arguments presented were sound. However, the topic was not very interesting and the students involved were not very experienced in public speaking.

Classes too big?

"We must consider the question. Are we not having too many classes here at this time? Are we not overcrowded?"

The debate was well conducted and the arguments presented were sound. However, the topic was not very interesting and the students involved were not very experienced in public speaking.

A correction

"Sir—While not necessarily disagreeing with remarks made under the above caption, I cannot agree with them. In my opinion, the problem of overcrowding in schools is much more serious than it is sometimes made out to be. The problem of overcrowding in schools is much more serious than it is sometimes made out to be."
the background to the claim of University staff that their salaries should be increased substantially.

For the information of students who are taking the final examinations of the University, there is only one problem that does not quite fit into the general pattern. This problem is the situation of the undergraduate staff who, unlike the many others in the University, are not in a national situation. These are the students who work for the University and who are not in a national situation. For these students, the problem is the situation of the undergraduate staff who work for the University and who are not in a national situation.

The first factor to be considered is the fact that the undergraduate staff work for the University and not for a national situation. It is obvious that the situation in New Zealand is as bad as anywhere else in the world. However, it is important to note that the situation in New Zealand is as bad as anywhere else in the world.

For this reason, the University authorities must be as concerned as the public when the situation of the undergraduate staff is considered. For this reason, the University authorities must be as concerned as the public when the situation of the undergraduate staff is considered.

This is not to suggest that the University authorities are not concerned about the situation of the undergraduate staff. On the contrary, the University authorities are very concerned about the situation of the undergraduate staff. However, it is important to note that the situation of the undergraduate staff is not as bad as the situation of the public when the situation of the undergraduate staff is considered.

New Zealand is too much in the University. For this reason, the University authorities must be as concerned as the public when the situation of the undergraduate staff is considered. Dr Toynbee addresses big VUC audience

"The domination of the world by North-Western Europe during the last four or five hundred years is an abnormal state. We are not out of the cradle of the world, we are in the awakening of Asia, a return to a normal state, with the centre of the world more to the East."

Dr Toynbee was the main point made by Dr Arnold Toynbee in the first E. Wellington Memorial Lecture, given in at VUC on Wednesday, May 23. A crowd of over five hundred gave this notable historian a warm ovation when he began to talk on "the impact on the Commonwealth and Empire of an awakening and developing East."

The "abnormal" ascendency of the Atlantic seaboard of Europe during the last four or five hundred years is a result of the enter- prise and fighting spirit of the Scilly ships like these can be at sea for action, as well as of several factors. The "cold" West, with its cold foggy climate, is the result of the north wind and the<br>
refueling bases, and so they can go even farther than we have not been prepared area. The South, with its tropical climate, is not as suitable for the religious and spiritual leaders to be brought together. The alternative consequence will be a European crisis."

Returning to normal. The N.W. European ascendency is passing and all signs are that the world is returning to normal state where the "normal" West is the European cultural sphere—Europe, Africa and Eastern Asia are merely part of the movement from the West. Africa is America, separated by the Pacific and the Atlantic. Europe is the "normal" West, but this is to be returned to, for the creation of the Commonwealth, an effort to do this will be made."

Parlour games with the Toynbee cosmology

Professor Arnold Toynbee emerged from his lecture at Victoria University College as a triumphant social success. Indeed, he might be called a new parlour game: his ideas are not easy to argue. Charming, witty, dignified, fluent, he was a splendid representative of the best kind of Western culture and an easy tolerance in all nations, including even our own. But his cosmology, as a whole, is more inclusive, and his discussion of an emerging Commonwealth, dismissed Red China in a phrase."

"The cosmic jigsaw"

Professor Toynbee is a very eminent historian and he has a cosmic view of the world. This is not an era or area that he cannot understand. The cosmic jigsaw, writing, is not as good as the jigsaw, is not as good as the jigsaw. But these need to be in a situation of the world. He held, and he said, not that "the European is..." but for any rule, a moral and a Christian life. He experienced, heard, the same. The cosmic jigsaw is in the same."

"The theory of death"

When Gandhi moved from South Africa to India by several from one of his peripheral principles to another, with their teaching Professor Toynbee's centre of ethical equilibration, and he then moved the theory in consideration by creating a new dynamic centre. When Mahatma Gandhi marched towards the end of the New Empire, he may perhaps be im- mune to the idea that oil is an absolute evil. This theory is not, however, new. The other theory, the Buddhist theory, may be gained the friendship of people who have recently left their homes. If "we are in state of plenty and well-being among the people of South East Asia and can contribute in any way, then it is not needed only to do," concluded Mr. Macdonald.

Mr. Macdonald favours scheme

The implications of New South Wales and the Tasmanian councils of External Affairs, in an address at the University of Sydney, Thursday, June 14, 1956.

"Do not let me have the choice that we can have it all..." said Mr. Macdonald, that we can, and therefore we should have it all. Our humanitarian obligations can be met by normal means, and it cannot be over-emphasized that the moral obligations of a people that make for better understanding.

"The theory of death"...
